

Best Practice to Secure and Label School Room/space as Sanitary (disinfected germs)

EXAMPLES

After cleaning and disinfecting (germs from) rooms and spaces, consider placing a seal (i.e. tape or label) over the entrance door(s), as a means to help ensure the area remains clean and unused. This will minimize the need to re-clean spaces upon returning campus to regular use (after extended downtimes).

Consider using site specific recognizable script and symbols to ensure authenticity (i.e "D" = disinfected -> include competent persons initials & date, etc.).
